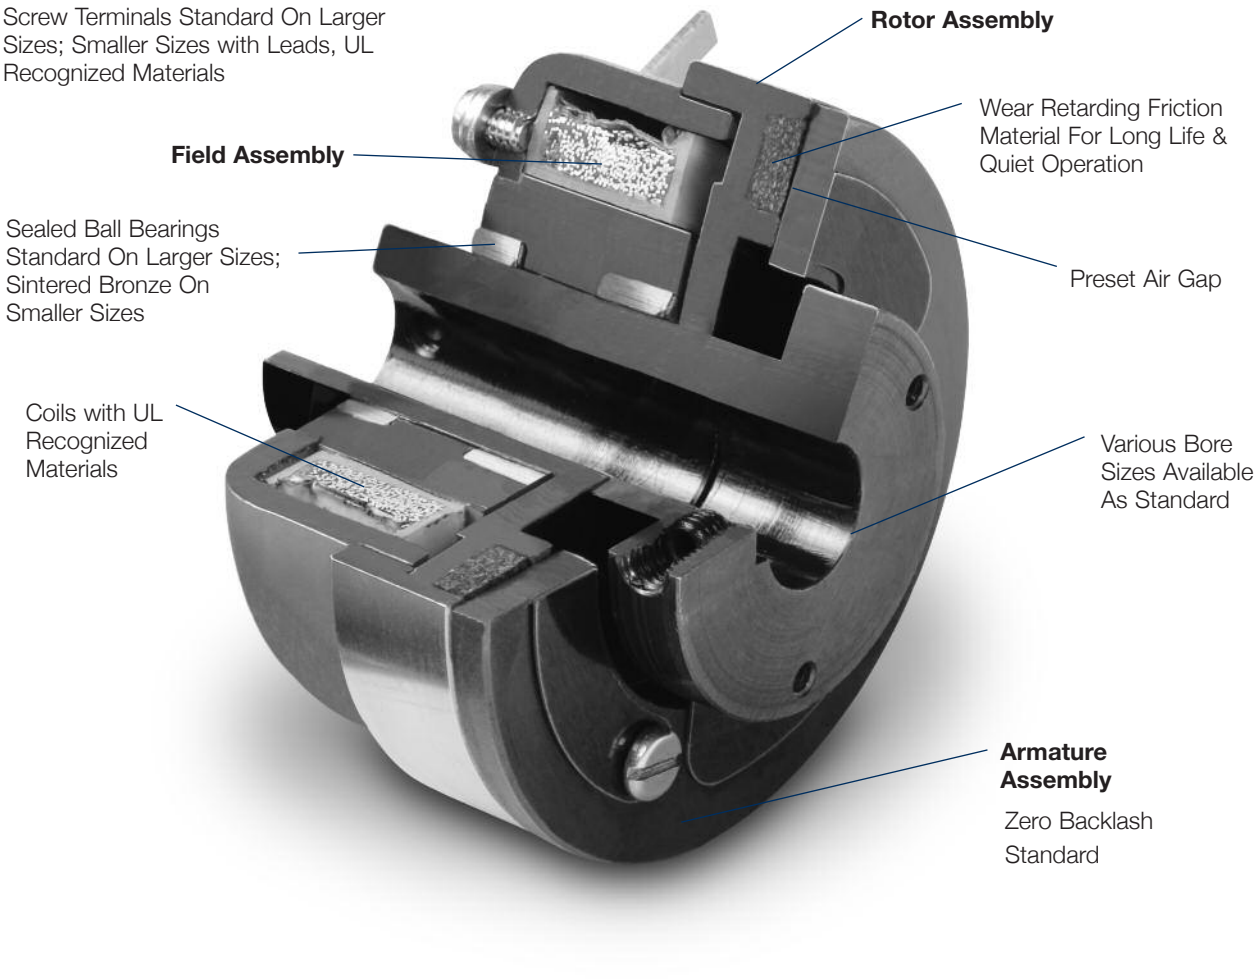
ALTRA INDUSTRIAL MOTION

Fractional HP Clutches/Brakes

Warner® Electric

An Altra Industrial Motion Company

Features



Typical Applications of Clutches & Brakes

Copiers/Printers
Packaging Machinery
Microfilm Readers
Medical Equipment
Conveyors
Postal Sorters/Readers
Document Feeders
Textile Equipment

Generating the Clutch or Brake Torque

Warner Electric clutches and brakes are designed to start and stop inertial loads when the voltage is turned on. When DC voltage is applied to the coil, the magnetic force caused by the magnetic flux pulls the armature across the air gap against the force of the zero-backlash spring attached to the armature. The mating of the armature and rotor face transmit torque.

When DC voltage is interrupted, the magnetic field collapses, and the zero-backlash spring retracts the armature from the rotor face. There is no residual torque produced.

Special Features of Warner Electric Clutches and Brakes

- Precision centered sleeve and ball bearings for long life
- Zero-backlash armature assembly providing a spring release for reliable and precise disengagement
- Stationary field coil assembly means no slip rings or brushes.
- All parts effectively protected against corrosion.
- Asbestos-free friction material
- Non-standard coil voltages available upon request
- Metric bore sizes available upon request
- Conforms to ROHS standards

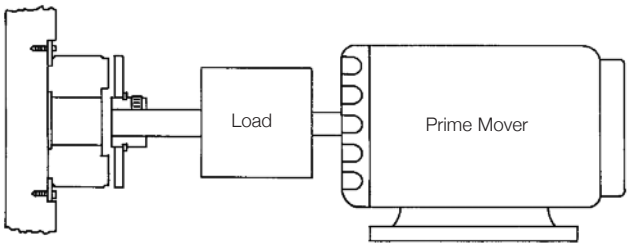
Selection Process

STEP 1

These graphics provide a visual guide to unit mounting in a typical installation.

PB

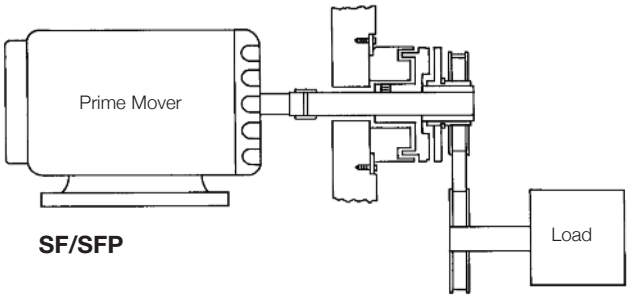
The brake will be mounted on a driven shaft with the magnet secured to the machine frame. When engaged, the brake will bring the rotating load to a stop and hold until power is removed.



PB

SF/SFP

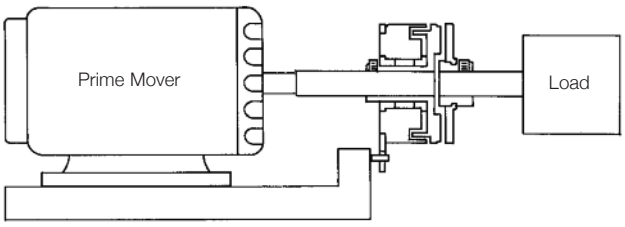
The SF or SFP clutches are designed for parallel shaft mounting and will connect to the load via a chain or belt drive. The clutch can be mounted to either a driving or driven shaft.



SF/SFP

SFC

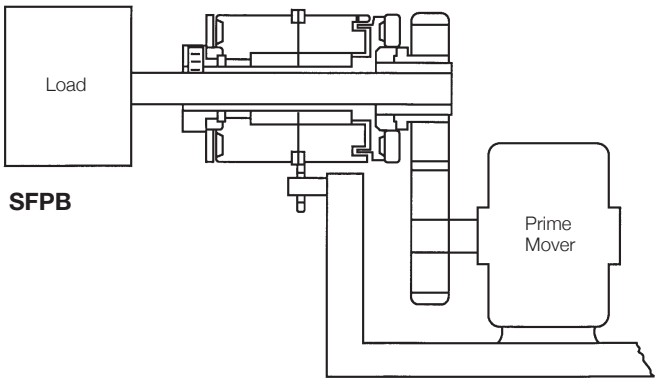
The SFC clutches are designed for use with two in-line shafts. Half of the clutch will mount to the driving shaft and the other half to the driven shaft. When engaged the unit will couple the two shafts together.



SFC

SFPB

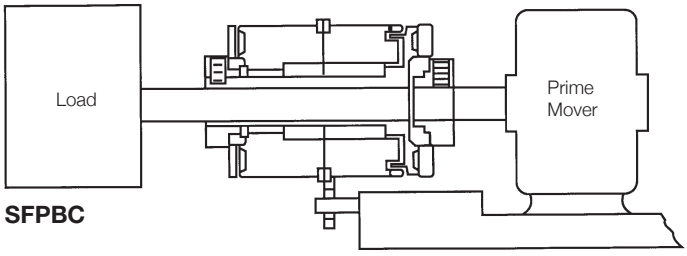
This clutch/brake combination will be mounted on a driven shaft with the brake located closest to the load. SFPB units are designed for parallel shaft mounting and will have input from a chain or belt drive. When the clutch is engaged, it will drive the load, when the brake is engaged, the load will be stopped and held, and the clutch input will rotate.



SFPB

SFPBC

This clutch/brake combination will be used with two in-line shafts with the brake on the driven shaft. When clutch engaged, the clutch will couple the two shafts together. With brake engaged, the driven shaft and load will be stopped and held while the input half of the clutch will rotate freely on the driving shaft.



SFPBC

STEP 2

Determine the shaft speed at the clutch or brake location. Whenever possible locate the clutch or brake at the highest speed shaft available to perform the desired task. A higher speed will provide a lower torque requirement and therefore a smaller clutch or brake.

STEP 3

Use the chart below to find the intersection of the speed and torque for your application. This will provide the unit size.

STEP 4

Using the appropriate catalog page confirm unit dimensions and mounting. Provide unit bore size(s) and coil voltage.

For additional calculation formulae and dynamic torque curves, please refer to page 14.

Lead wire is UL recognized style 1213, 1015 or 1430, 22 gage.
Insulation is .050" O.D. on 090, 110, 150 units; .064" or .095" O.D. on all other units.

Customer shall maintain:

- Squareness of the brake mounting surface with armature shaft within .005 T.I.R.
- Concentricity between the brake mounting pilot diameter and the shaft not to exceed .010 T.I.R.
- Initial air gap setting of .005 - .020 inches.

265	.088	1024	.350	67.1	.667	18.0

Lead wire is UL recognized style 1213, 1015 or 1429, 22 gage.
Insulation is .050" O.D. on 110 unit; .064" or .095" O.D. on all other units.

Customer shall maintain:

- A loose-fitting pin through the anti-rotation tab to prevent preloading the bearings.
- Contentricity between the shafts within .005 T.I.R.
- Initial air gap setting of .008 - .020 inches.

Determining the Clutch or Brake Size

First, determine which style clutch or brake you need. The type of unit selected depends upon the function to be performed.

Next, determine the size of the clutch or brake. There are two methods you can use to calculate the dynamic torque required.

$$T_d = \left[\frac{WR^2 \times N \pm T_L}{C \times t} \right] \times S.F.$$

Where:

- WR^2 = Total inertia reflected to the clutch/brake, lb.–in.^{2} (kg.m^2)
- N = Shaft speed at clutch/brake, RPM
- C = Constant, use 3696 for English units and 9.55 for metric units
- t = Desired stopping or acceleration time, seconds
- T_L = Load torque to overcome other than inertia, lb.–in. (N–m)
- S.F. = Service Factor, 1.4 recommended
- T_d = Average dynamic torque, lb.–in. (N–m)

Note:

- + T_L = engage a clutch or accelerate
- – T_L = brake or decelerate

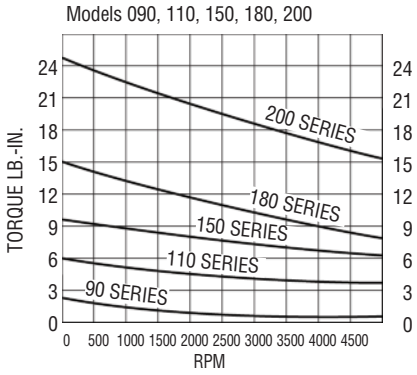
Warner Electric clutches and brakes are rated by static torque. The clutch or brake size can also be determined using the selection chart. Find the intersection of the prime mover horsepower (HP) and shaft speed at the brake using the selection chart on Page 3. The relationship between the horsepower and speed to determine the dynamic torque required is expressed as:

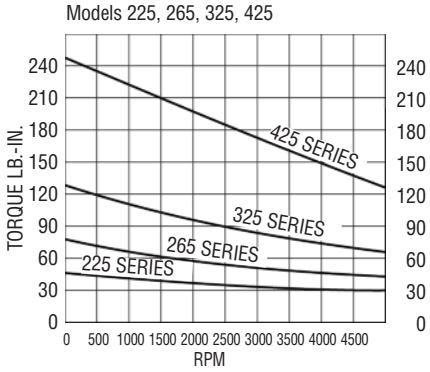
$$T_d = \frac{63{,}025 \times P}{N} \times S.F.$$

Where:

- T_d = Average dynamic torque, lb.–in.
- P = Horsepower, HP
- N = Shaft Speed
- S.F. = Service Factor
- 63,025 = Constant

Dynamic Torque Curve

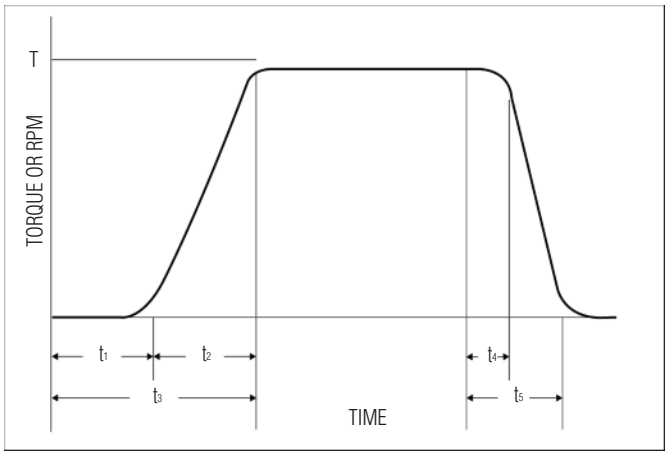




Torque Data

CLUTCHES: CLUTCH COUPLINGS: POWER ON BRAKES			
MODELS	TYPICAL OUT-OF-BOX TORQUES LB. – IN.	RATED STATIC TORQUES LB. – IN.	TYPICAL TORQUES AFTER BURNISHING LB. – IN.
090	2	2.5	3
110	5	6	8
150	8	10	15
180	12	15	20
200	20	25	30
225	40	50	60
265	65	80	90
325	100	125	150
425	225	250	275

Response Times for Clutches & Brakes



Where:
t_1 = Delay time when engaging
t_2 = Torque rise time
t_3 = Time to full torque or speed
t_4 = Disengaging time (90% torque)
t_5 = Time to zero speed
T = Full torque or speed

Response Times

MODEL	RATED STATIC TORQUE LB. – IN.	TORQUE BUILD-UP TIME MILLISECONDS		TORQUE DECAY TIME MS
		80% OF RATED TORQUE	100% OF RATED TORQUE	10% OF RATED TORQUE
090	2.5	4.8	7.5	6.6
110	6	7.2	10.5	11
150	10	9	12	17
180	15	10	14	14
200	25	33	48	35
225	50	27	42	20
265	80	22	40	30
325	125	43	60	36
425	250	45	70	50

NOTES:

1. Torque decay time is dependent on the type of arc suppression circuit used. Decay times shown in table assume use of a diode in parallel with the coil for arc suppression. If no arc suppression is used, torque will decay almost instantly.
2. Actual response times depend on several factors such as inertia being accelerated or decelerated, speed, load torque, and type of switching used.
3. Time to full torque can be shortened by applying overexcitation voltages up to 50 times the rated coil voltage.
4. The time to full torque is also dependent on the voltage supply. If the clutch or brake is underpowered (low voltage), a decrease in torque will result. The clutch or brake should be sized based upon the worst-case voltage condition. The DC voltage supply should be filtered full wave for highest efficiency. Half wave DC voltage will result in lower torque output.

How To Order

Building an Ordering Part Number is fast and easy using the Specifications charts on each product page. Simply select the clutch type, clutch size, bore size(s) and voltage you require.

Ordering Number System Example: SFC200-516-316-12

SFC – **200** – **516** – **316** – **12** **XX**

Altra Industrial Motion

www.altramotion.com

Our comprehensive product offering is comprised of nine major categories including electromagnetic clutches and brakes, heavy duty clutches and brakes, overrunning clutches, gearing, engineered couplings, engineered bearing assemblies, linear products and belted drives. With thousands of product solutions available, Altra provides true single source convenience while meeting specific customer requirements. Many major OEM's and end users prefer Altra products as their No.1 choice for performance and reliability.
